FUNDAMENTALS OF GERIATRIC PHARMACOTHERAPY BY DR. LISA C. HUTCHISON PHARM.D. MPH BCPS, DR. REBECCA B. SLEEPER PHARM.D. FASCP BCPS PDF

This publication *Fundamentals Of Geriatric Pharmacotherapy By Dr. Lisa C. Hutchison Pharm.D. MPH BCPS, Dr. Rebecca B. Sleeper Pharm.D. FASCP BCPS* deals you much better of life that could create the quality of the life brighter. This *Fundamentals Of Geriatric Pharmacotherapy By Dr. Lisa C. Hutchison Pharm.D. MPH BCPS, Dr. Rebecca B. Sleeper Pharm.D. FASCP BCPS* is what the people now require. You are below and also you may be precise and also sure to obtain this book *Fundamentals Of Geriatric Pharmacotherapy By Dr. Lisa C. Hutchison Pharm.D. MPH BCPS, Dr. Rebecca B. Sleeper Pharm.D. FASCP BCPS* Never ever question to get it also this is just a publication. You could get this publication *Fundamentals Of Geriatric Pharmacotherapy By Dr. Lisa C. Hutchison Pharm.D. MPH BCPS, Dr. Rebecca B. Sleeper Pharm.D. FASCP BCPS* as one of your collections. However, not the collection to display in your shelves. This is a valuable publication to be reading compilation.

Review

Fundamentals of Geriatric Pharmacotherapy:
An Evidence-Based Approach, 2nd Edition

Lisa C. Hutchison, PharmD, FCCP, MPH, BCPS; Sleeper, Rebecca B., PharmD, FCCP, FASCP, BCPS

MedInfo Now Doody's Review Services

[REVIEWER'S EXPERT OPINION]

Marissa Cavaretta, PharmD(Temple University School of Pharmacy)

****Description****

This book provides a general overview of the management of the common disease states that afflict the elderly population. This comprehensive review also addresses key areas such as pharmacokinetic and pharmacodynamic changes in the elderly that affect drug therapy, as well as social, economic, and ethical challenges to consider before therapy is begun and tools to improve medication management across the continuum of care.

****Purpose****

The purpose is to focus on the evidence published about the elderly since they are often an underrepresented population in clinical trials and disease state guidelines. The book is designed as a text for pharmacy students and a helpful reference for pharmacists. It is not written to teach the basics of pharmacology or pharmacotherapy, rather it focuses on challenges and other considerations in geriatric patients. Often, practitioners treat the elderly the same as their younger patients and this book sheds lights on the

fundamental differences between the old and young and details the reasons for differences.

****Audience****

It is intended for pharmacy students and pharmacists and it is a good reference for those who are not specialists in geriatrics. It is too general for geriatric practitioners, but they do not appear to be the intended audience.

Many of the authors are leaders or specialists in geriatrics.

****Features****

The book covers two major areas of geriatric care: issues in aging and pharmacological treatment. The first section is an overview of geriatric challenges and principles for prescribing, with an emphasis on pharmacokinetic and pharmacodynamic changes in aging, strategies to improve medication management and reduce polypharmacy, and adverse drug events and considerations for improving hospice and palliative care. The second part of the book focuses on treatments for common disease states and reviews areas such as cardiovascular care, infectious diseases, CNS disorders, and psychiatric illnesses. Drug tables throughout the book simplify the clinical pearls of each treatment. The treatment algorithms are easy to follow and illustrated well.

Patient cases help readers apply the information and the book is well referenced. The main differentiator of this book is the information in the first section. It is difficult to teach the principles of prescribing and social, behavioral, and ethical issues in the classroom, and often these topics are overlooked altogether in the therapeutics curriculum. The authors provide an excellent review of these topics.

****Assessment****

This book is quite comprehensive. I would use it in the classroom and would recommend it to pharmacy residents, medical students/residents, and pharmacists to expand their knowledge in geriatrics. This edition contains updated therapeutic guidelines and references, covers more disease states, and adds topics such as hospice and palliative care. A similar book, Geriatric

Pharmacotherapy: A Guide for the Helping Professional, Olsen et al.

(American Pharmacists Association, 2007) covers many of these same topics but is largely outdated. Another, Pharmacy Practice in an Aging Society, Wick (The Haworth Press, 2006), addresses in detail many of the topics in first section of this book, but does not review pharmacological treatment. Other references focus on solely on disease states such as Alzheimer's disease and psychiatric disorders, but few include all the information this book does.

Weighted Numerical Score: 95 - 4 Stars!

(Marissa Cavaretta Doody's Review Services 2015-05-08)

From the Back Cover

By 2050, the world's 65 and older population will double, and the 85 and older population will grow fivefold. As the number of older patients surges, so too will the medication management challenges pharmacists and other health care providers face in this population. For the Geriatric population, complex cases are often the norm. Providing safe and effective care can mean considering assessments of function and cognition, contacting multiple prescribers, and understanding a patient's history, beliefs, and caregiving situation before making therapeutic decisions.

Fundamentals of Geriatric Pharmacotherapy, Second Edition gives practitioners the information they need to improve outcomes and personalize care for elderly patients. New to this edition are new chapters on

• Palliative and Hospice Care and • Infections and Antimicrobial Stewardship. Additional enhancements in this edition include added links to new guidelines, assessment tools, and videos. Additional cases and a study guide will match the content map for certified geriatric pharmacists examination.

Useful features throughout the book guide practitioners in navigating the maze of information required when caring for the older patient.

These include:

- Summarized treatment guidelines
- Reviews of the evidence base
- Special focus on recommendations for the frail elderly
- Full case studies in each chapter
- Clinical Pearls
- Key Points and Key Terms (with definitions) in each chapter

The demands of an aging population mean that a greater understanding of geriatric pharmacotherapy is now essential for all health care providers. *Fundamentals of Geriatric Pharmacotherapy, Second Edition* ensures you have the information to allow providers to respond appropriately.

About the Author

Lisa Hutchison, Pharm.D., MPH, FCCP, BCPS

Lisa Hutchison earned her BS pharmacy (1982) and her PharmD (1983) at the University of Tennessee Center for Health Sciences in Memphis. In 1984, she completed a Pharmacy Residency at Memphis Veterans Affairs Medical Center. She earned her MPH (2001) from the University of South Florida College of Public Health in Tampa and is a Board Certified Pharmacotherapy Specialist since 1992.

Dr. Hutchison was the Education and Quality Management Coordinator for the Little Rock VA Medical Center. Following this she was employed as the Assistant Director for Clinical Affairs at Florida Hospital in Orlando, FL. Currently she is an Associate Professor in the Department of Pharmacy Practice at the University of Arkansas for Medical Sciences and Clinical Pharmacist at the Donald W. Reynolds Institute on Aging.

In 1993, Dr. Hutchison won the Award for Achievement in the Professional Practice of Pharmacy in Organized Health Care Settings from the American Society of Health System Pharmacy for the publication 'Clinical privileges for pharmacists.' In 2008, the American Pharmacists Association recognized her with the Distinguished Achievement Award in Hospital and Institutional Practice. She has served as Chair-Elect and Chair of the Geriatrics Practice and Research Network of the American College of Clinical Pharmacy and was named a fellow of this organization in 2008.

Rebecca B. Sleeper, PharmD, FASCP, BCPS

Dr. Sleeper is the Division Head of the Texas Tech University Health Sciences Center School of Pharmacy's Geriatrics Division in the Department of Pharmacy Practice. She received her PharmD from the University of Rhode Island and Specialty Residency training in Geriatric Pharmacotherapy from TTUHSC School of Pharmacy in Amarillo. Following this, she joined the faculty at the TTUHSC School of Pharmacy's Lubbock campus in 1999. She became a Board Certified Pharmacotherapy Specialist in 2000 and a Fellow of the American Society of Consultant Pharmacists in 2002.

Dr. Sleeper has developed consulting and collaborative drug therapy management services in long-term care, assisted living, and skilled facilities and is currently a consultant pharmacist at the Mildred and Shirley L. Garrison Geriatric Education and Care Center, a teaching nursing facility on the TTUHSC campus.

Dr. Sleeper has been the recipient of multiple preceptor of the year and teaching team of the year awards for Geriatric Pharmacotherapy Clerkships and Neurosensory coursework. In 2002 she was awarded the Texas

Society of Health System Pharmacist's New Pharmacist Award and is a Past Chair of the American College of Clinical Pharmacy's Geriatrics Practice and Research Network

Good book, wish the charts were a little simpler ...

By Reader

Okay book, wish the charts were a little simpler to navigate and not much in terms of pathophysiology or pharmacology, otherwise okay. I expected much more and will have to supplement with Hazzard's Geriatric Medicine and Gerontology. Authors, if you are reading this and you should, as a colleague to a colleague, the book needs to be greatly expanded to meet demands of clinical pharmacists. I would suggest stealing some points, like pharmacological class and pathophysiological approach review from Hazzard's. Sorry, but some of your charts group different drug classes and diseases together like LT modifiers in COPD chapter (zileuton and monteleukast - different MOAs) and COPD/Asthma - different pathophysiology > grouping makes things all the more unclear and confusing necessitating use of other sources, like Hazzard's, which is getting free advertisement.

I would like to get the hardcopy instead

By FIG

NOTE: This applies to the KINDLE edition only. The content is relevant, but the KINDLE edition of this book does not show up appropriately. There are typos and the tables in the book such as 2.1 and 2.2 do not show up as tables at all. They show up as paragraphs. If possible, I would like to get the hardcopy instead, until the publisher works out the kinks in the KINDLE edition.
