A good distillation of some of the most important works on thinking and living well

By Mike Stewart

Lawrence Enderson has obviously read many books. His choice of books, or at least the ones which to which he refers to in his writing of Pebbles of Perception are good books. From them he draws their essential teachings which he then packages for dissemination to the reader. He made a comment early on in the book about how he hopes that certain people, Sarah, Lawrence and Louise, will read this book. Perhaps those are his grandchildren. The book is purportedly intended to teach them (and us) how to make better choices. Enderson tries to show how few good choices make all the difference in life.

The problem is, a lot of his advice is not advice, but rather statements on the way things are. He does not tell me what to do, or why to do it. Most of the time he just describes the state of affairs as described by the books to which he refers. For example he describes how our brains work and how cognitive biases can affect our decisions. While we can infer from some of those descriptions of states of affairs on how better to conduct ourselves so that we do not succumb to our cognitive biases, he could've done a better job in telling us specifically what steps to take to overcome those biases. I don't know if he knows. It may be that these are just his musings and thoughts which he hopes that the reader will implement on their own.

It's a short book and many of the topics are very important but are given a very superficial treatment. For example, he talks about marriage in about seven pages. While he does say that marriage is the most important decision any person will make in their lives, he does not give enough weight to the effects that a choice of a partner can make in one's life. Nor does he give us tools or steps or questions to ask in order to help make that decision.

The single biggest criticism that I have for the book is that the three parts on which the book is based do not get support from their contents. The author says that curiosity character and choice are intertwined. Curiosity and character make for better choices. However, the author never shows how curiosity itself makes for better choices, nor does he show how character makes for good choices. Finally in the third part, the author talks about choices. The choices that he talks about include who to marry, where to live, what job to take, whether to have children, and so on, all major life choices. However he does not show how curiosity and character provide for the resolution of these complex and important choices. Each choice is treated as a separate chapter and distinct from the others. It's like the author took some notes on each of the subject and bound his notes together into a book.

The author's original artwork aroused my curiosity. As another reviewer mentioned, it is cryptic, and makes the reader think: what is he getting at with this depiction? The bearded gentleman in the artwork is a depiction of the author which I found touching and intriguing. I admire the author's undertaking to compile his wisdom for his future generations. I think if this book is looked at more like a book carrying what the author has learned on through to future generations in his family, it is a good book.

The author has created a book which compiles the essential elements of many of the important writings of the last century. Specifically, the author has distilled these works into a selection of important life "bullet points": factors and choices that will have a large impact on a person's life. And a description of them and sometimes even a way to resolve them has been borrowed or influenced by the important writers of the author's life. For somebody who will not read all the books to which the author refers, this book provides a quick, and punchy way to access the knowledge of some of the better thinkers and writers of the last century.

It does a great job of making you look at situations we all ...

By colman o flynn

Common sense is not as common as you would think, but this book is full of the stuff. It does a great job of making you look at situations we all face at different stages of our lives thru a different lens. Why do incentives result in unexpected outcomes; how many people count you as a WARM friend; why experiences trump things every time. The answers are not in the book, it just helps you understand the questions. Great read !

4 of 5 people found the following review helpful.

bite sized chapters pack a punch

By RR

this book offers a quick roundup of thinking and writing on making better choices. Nice references to make it a starting point for wider exploration. it could be improved if the author infuses some personal experiences around each chapter - otherwise it comes across as a cliff notes on each topic.
