Terrible book. Very little content and very little depth. I've read a fair amount of machine learning books and this is by far the worst one.

You will learn the definition of an algorithm, basic data structures (queue, stack) and a few takes on search algorithms. The content is similar to what you might spend two lectures on in any "Data Structures & Algorithms" course, and has very little to do with AI specifically. If you want to learn basic algorithms, get a real book on "data structures and algorithms in (insert language)".

If you already know the basics of swift and algorithms, this book will make you no better either of the subjects. I think they misspelled the title, it should be "superficial" not "artificial".

If you are new to programming and interested in machine learning, I'd recommend the book "Make Your Own Neural Network" by Tariq Rashid. It is a brilliant introduction to artificial intelligence and programming, and you will actually learn and create something exciting and useful.

Note: This book comes in 4 flavours (languages). Each are rated 4.5/5 with 50+-2 votes. Artificial?

Fantastic content! Very thorough on its explanation on the varied algorithm methods that can help solve various issues like time scheduling, search engines, time constraint that can be resolved easily through algorithm techniques. I am not that techy person but this books gave me an insight on how convenient AI can be if an issue will arise. A pleasure to read this informative book!
